PROFESSIONAL SUMMARY

Backend and Full-Stack Developer with 6+ years of experience in building scalable and high-performance web applications using **Node.js**, **AngularJS**, **ReactJS**, **TypeScript**, and **GraphQL**. Experienced in **blockchain development and integration** using **Web3**, **Binance Smart Chain (BSC)**, and **smart contracts**. Skilled at backend architecture, database optimization, and creating seamless user experiences through efficient API and data design.

CORE SKILLS

Backend: Node.js, Express.js, TypeScript, GraphQL, REST APIs, NPM, RxJS, GoLang

Frontend: AngularJS, ReactJS, HTML5, CSS3, JavaScript

Blockchain: Web3.js, Binance Smart Chain (BSC), Wallet Integration (Metamask, Trust Wallet, WalletConnect), Smart Contracts

Databases: MongoDB, MySQL, PostgreSQL, Redis, Solr, Sphinx

Dev Tools: Git, Bitbucket, VS Code, Postman, JIRA, Nginx, Apollo Sandbox

Cloud & Payment Integrations: AWS (S3, KMS), Stripe, Razorpay, Twilio

PROFESSIONAL EXPERIENCE

Nextay Solutions Pvt Ltd | June 2019 – May 2021 Worked on backend systems using Node.js and MongoDB, improving application efficiency and system stability.

Future Trends LLC | May 2021 – July 2022 Developed and deployed REST APIs and real-time applications for e-commerce and data analytics clients.

Matrimony.com | August 2022 – Present Contributing to backend services and database optimization using Node.js, TypeScript, GraphQL, and Redis

PROJECT HIGHLIGHTS

MatrimonyBiodata (2025) — *Node.js, TypeScript, GraphQL, MySQL, Redis, Solr*

Led and worked hands-on with the backend team to build a scalable system **Node.js with a microservices architecture**, ensuring modularity and high availability. Implemented **GraphQL** to handle complex, optimized queries and reduce over-fetching. Used **MySQL** for transactional data storage, **Redis** for caching and performance optimization, and **Apache Solr** for fast and efficient search capabilities. Integrated the Biodata application with **Bharat Matrimony** to enable **real-time data synchronization**, improving system reliability and data consistency.

Luv.com (2024–2025) — *Node.js, TypeScript, React.js, GraphQL, MySQL, Redis, Solr*
Led and actively contributed to backend development for an **Indian dating platform** using **Node.js microservices**. Implemented **GraphQL** for optimized data fetching, **Redis** for caching, and **Solr** for advanced search. Enabled **live user data synchronization** to support real-time interactions and high concurrency.

MeraLuv (2023–2024) — *Node.js, TypeScript, GraphQL, MySQL, Redis, Solr*
Led and contributed hands-on to backend services for a **large-scale American dating platform**. Optimized **API performance and query execution** using **GraphQL**, improved response times with **Redis** caching, and handled high-traffic workloads with scalable service design.

Bharat Matrimony Revamp (2022–2023) — *Node.js, TypeScript, GraphQL, MySQL, Redis, Solr*
Re-architected backend services using a **Node.js microservices architecture** and optimized database layers to improve **scalability and maintainability**. Enhanced **GraphQL resolvers and backend workflows**, resulting in a **40% performance improvement** and significantly reduced application load times.

Bitconia Lottery System (2021–2022) — *Blockchain, Node.js, MongoDB*
Designed and developed a **decentralized lottery DApp** with smart contract integration. Implemented **secure RNG-based winner selection** and **blockchain-backed prize distribution**. Built backend services using a **Node.js monolithic architecture** to handle transaction validation, user management, and system integrity.

N2Coin (2020–2021) — *Blockchain, Node.js, MongoDB*
Built an **ICO presale and token management platform** with **Binance Smart Chain** integration. Implemented wallet connectivity, token allocation and vesting logic, and **secure blockchain transaction handling** for fundraising operations.

Doodem (2020) — *Node.js, MongoDB, Express*
Developed a **content subscription platform** supporting **pay-per-view (PPV)** access and **tip-based monetization**. Implemented **secure APIs**, subscription management, and **scalable backend services using a Node.js monolithic architecture** to support reliable, creator-driven content delivery.

Phonoart (2020) — *Node.js, MongoDB, Express*
Implemented a **cart-less shopping system** using **QR code scanning** and **virtual currency payments**. Designed a **Node.js microservices-based backend** to support seamless checkout flows and **real-time transaction processing** with high reliability.

Blockchain Firm (2019) — *AngularJS, HTML, CSS*
Developed responsive, **SEO-optimized marketing websites** and dynamic web pages. Focused on performance, cross-browser compatibility, and clean UI for blockchain-focused products.

EDUCATION

B.E. Computer Science and Engineering PSNA College of Engineering and Technology |
2015 – 2019
